Note!

- In this manual, abbreviations are employed to refer to the package types. See section 1.4 Abbreviations and Terminology;
-  indicates that the various device pins are compatible when the package types are the same;
- The GW1N-2 and GW1N-4 pins are fully compatible; GW1N-6 and GW1N-9 pins are fully compatible;
- In terms of the MG160 package, the GW1N-1, GW1N-2, and GW1N-4 pins are compatible; however, the GW1N-1 series has less I/O pins. Please refer to [GW1N FPGA Products Pinout and GW1N-2&2B&4&4B Products Pinout for the detailed information](#);
- The JTAGSEL_N and JTAG pins are exclusive. The four pins of JTAGSEL_N and loaded JTAG (TCK, TDI, TDO, and TMS) cannot be simultaneously used as I/O. The data noted in this Table refer to when the loaded four JTAG pins (TCK, TDI, TDO, and TMS) are used as I/O.

2.5 Pin Definitions

The location of the pins in the GW1N series of FPGA products varies according to the different packages.

Table 2-9 provides a detailed overview of user I/O, multi-function pins, dedicated pins, and other pins.

Table 2-9 Definition of the Pins in the GW1N series of FPGA products

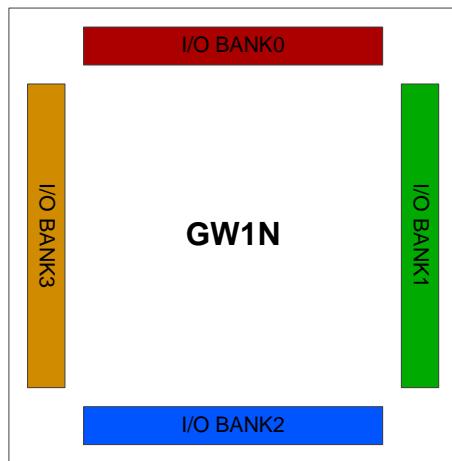

Pin Name	I/O	Description
User I/O Pins		
IO[End][Row/Column Number][A/B]	I/O	[End] indicates the pin location, including L(left) R(right) B(bottom), and T(top) [Row/Column Number] indicates the pin Row/Column number. If [End] is T(top) or B(bottom), the pin indicates the column number of the corresponding CFU. If [End] is L(left) or R(right), the pin indicates the Row number of the corresponding CFU. [A/B] indicates differential signal pair information.

2.6 Introduction to the I/O BANK

There are four I/O Banks in the GW1N series of FPGA products, as shown in Figure 2-1.

Figure 2-1 GW1N I/O Bank Distribution

This manual provides an overview of the distribution view of the pins in the GW1N series of FPGA products. Four IO Banks in GW1N series FPGA products are marked with four different colors.

User I/O, power, and ground are marked with different symbols and colors. The various symbols and colors used for the various pins are defined as follows:

- “” denotes I/Os in BANK0. The filling color changes with the BANK.
- “” denotes I/Os in BANK1. The filling color changes with the BANK.
- “” denotes I/Os in BANK2. The filling color changes with the BANK.
- “” denotes I/Os in BANK3. The filling color changes with the BANK.
- “” denotes VCC, VCCX, and VCCO. The filling color does not change.
- “” denotes VCC. The filling color does not change.
- “” denotes NC.
